SOFTWARE CHANGE GROUP IMPLEMENTATION REPORT

Change Request Indexes:

1. JF/ICT/24/15 — Export Filtered Visit History to CSV
2. JF/ICT/24/08 — Display Visit Duration
3. JF/ICT/24/26 — Login Password Show/Hide Toggle

Combined Report Title:

Field	Details
Combined Report Title	Implementation Report for Three Visitor Pass System Change Requests
Change Request Indexes	JF/ICT/24/15, JF/ICT/24/08, JF/ICT/24/26
Implementation Status	Implemented; Testing Completed
Implementation Date	29 October 2026

1. Implementation

1.1 Business Requirement

The Visitor Pass system needed three usability improvements:

1. Staff needed a way to download filtered visit history for reporting and review.
2. Staff needed to see how long visitors stayed on the premises.
3. Staff needed a way to reveal or mask the password entered on the login page.

These changes improve record handling, visit monitoring, and login usability while using the existing system and database.

1.2 Existing Behaviors

Before implementation:

- Staff could filter visit history by visitor name, NIC, host, and date range, but could not download the results as a CSV file.
- Visit entry and exit times were stored and displayed, but elapsed visit duration was not shown.
- The login password field was always masked, with no control to reveal the entered password.

1.3 Requested Changes

Change Request JF/ICT/24/15 — Visit History CSV Export

- Add a Download CSV option to the Visitor History page.
- Export records matching the selected visit-history filters.
- Include a header row and relevant visit details.

Change Request JF/ICT/24/08 — Visit Duration

- Display visit duration in the overall Visit History page.
- Display visit duration in each Visitor Profile's visit history.
- Display In progress for visits without an exit time.
- Include duration in the visit-history CSV export.

Change Request JF/ICT/24/26 — Login Password Show/Hide

- Add a client-side control inside the login password field.
- Toggle the password input between password and text.
- Keep the password masked on page load.
- Show only the open-eye icon while the password is hidden.
- Show only the eye-slash icon while the password is visible.
- Include accessible aria-label and aria-pressed attributes.
- Use a type="button" control so it does not submit the login form.
- Keep the password text from overlapping the icon.

2.Implementation

2.1 Implementation Summary

All three changes were implemented in the Visitor Pass system.

The Visitor History page now provides a CSV download using the existing filter criteria. The export includes visit details, entry and exit information, staff names, and visit duration.

The overall history page and individual visitor profiles now display calculated visit duration. Completed visits show their elapsed time in days, hours, and minutes. Visits without an exit time display In progress.

The login page now includes an eye button inside the password field. The password is masked by default. Clicking the button toggles the input between password and text and displays only the icon corresponding to the current state. Accessibility attributes are updated when the state changes.

2.2 Affected Files

File	Change	Purpose
history.php	Modified	CSV export button and download logic; Duration display in visit history; Duration included in CSV export.
visitor.php	Modified	Duration display in an individual visitor's visit history.
index.php	Modified	Login password show/hide button, icon state, and accessibility attributes.
assets/style.css	Modified	Eye icon styling and positioning; input spacing; display of only the icon matching the password state.

2.3 Technical Changes

CSV Export

- The existing prepared query and filters are reused.
- The CSV response uses a text/csv content type and an attachment filename.
- A UTF-8 BOM is included for spreadsheet text compatibility.
- The CSV contains visit ID, visitor, host, entry/exit times and methods, staff names, and duration.
- The existing maximum of 500 queried records also applies to the CSV export.

Visit Duration

- Duration is calculated using the existing entry_time and exit_time values.
- Completed visit duration is shown in days, hours, and minutes.
- Visits without an exit time display In progress.
- Duration appears in the overall history, visitor profile history, and CSV export.
- No new database fields are required.

Login Password Toggle

- The password input defaults to type="password".
- Client-side JavaScript toggles the input type between password and text.
- The button uses type="button".
- aria-label and aria-pressed values reflect the current state.
- The open-eye icon is shown while the password is hidden.
- The eye-slash icon is shown while the password is visible.
- CSS reserves space for the button inside the password input.

2.4 Implementation Logic

Visit History CSV Export

1. Read the existing visitor and date filter values.
2. Execute the existing prepared visit-history query.
3. If CSV export is requested, send CSV download headers.
4. Write the CSV header row and the matching visit records.
5. Stop HTML page rendering after the download response is written.
6. Otherwise, display the normal filtered history page.

Visit Duration

1. Load visit records with their existing entry and exit timestamps.
2. If a visit has no exit time, display In progress.
3. Otherwise, calculate the difference between entry and exit timestamps.
4. Convert the elapsed minutes into days, hours, and minutes.
5. Display the duration in the history table and visitor profile.
6. Include duration in the CSV export.

Login Password Show/Hide

1. Load the login page with the password input masked.
2. Initialize the toggle with aria-pressed="false" and the open-eye icon visible.
3. When clicked, change the input type to text.
4. Set aria-label to Hide password and aria-pressed to true.
5. Display the eye-slash icon and hide the open-eye icon.
6. When clicked again, change the input type to password.
7. Set aria-label to Show password and aria-pressed to false.
8. Display the open-eye icon and hide the eye-slash icon.

2.5 Error and Data Handling

- CSV export uses the existing prepared query and filter values.
- If no visit records match the selected filters, the CSV should contain its headings and no data rows.
- The CSV export is subject to the existing 500-record query limit.
- Visit duration uses existing visit timestamps and does not write new database data.
- Visits without an exit time are handled as In progress.
- The password toggle only changes the input's display type in the browser.
- The existing server-side login authentication remains unchanged.
- No database schema changes are required.

3.Testing & Verification

3.1 Testing Approach

Testing Type:
- Functional testing
- Positive testing
- Validation and no-result testing
- UI testing
- Accessibility attribute testing
- Regression testing

Environment: Development environment using XAMPP, PHP, and MySQL/MariaDB
Browser: Chrome
Test Roles: Authenticated Admin/Security staff; unauthenticated user for login tests

Testing Status: Completed.

3.2 Test Cases

Test ID	Change	Test Case	Expected Result	Actual Result	Status
TC-01	CSV Export	Download visit history without filters.	CSV downloads with column headings and up to 500 visit records.	As expected	Pass
TC-02	CSV Export	Filter by visitor name and download CSV.	CSV contains only matching records.	As expected	Pass
TC-03	CSV Export	Filter by NIC and download CSV.	CSV contains only matching records.	As expected	Pass
TC-04	CSV Export	Filter by host and date range, then download CSV.	CSV contains records matching all selected filters.	As expected	Pass
TC-05	CSV Export	Download CSV when no records match.	CSV contains column headings and no data rows.	As expected	Pass

TC-06	CSV Export	Open the downloaded file in spreadsheet software.	File opens as CSV columns and text displays correctly.	As expected	Pass
TC-07	CSV Export	Use the normal Search button.	History page continues to display filtered results normally.	As expected	Pass
TC-08	CSV Export	Check visit details and duration in the downloaded CSV.	Exported details match the visit records.	As expected	Pass
TC-09	Visit Duration	View overall history containing a completed visit.	Duration column displays elapsed time between entry and exit.	As expected	Pass
TC-10	Visit Duration	View overall history containing a visit with no exit time.	Duration displays as “In progress”.	As expected	Pass
TC-11	Visit Duration	View a visitor profile containing completed visits.	Profile history displays duration for each completed visit.	As expected	Pass
TC-12	Visit Duration	View a visitor profile containing an open visit.	Open visit displays as “In progress”.	As expected	Pass
TC-13	Visit Duration	Check a visit lasting less than one hour.	Duration displays correctly in minutes.	As expected	Pass
TC-14	Visit Duration	Check a visit lasting one or more hours or days.	Duration displays the correct days, hours, and remaining minutes.	As expected	Pass
TC-15	Visit Duration	Export visit history after duration is added.	CSV includes a Duration column with corresponding values.	As expected	Pass
TC-16	Visit Duration	Check existing history and visitor profile details.	Existing links, entry/exit times, and staff details remain available.	As expected	Pass
TC-17	Password Toggle	Load the login page.	Password is masked, open-eye	As expecte	Pass

			icon is visible, and aria-pressed is false.	d	
TC-18	Password Toggle	Click the open-eye icon.	Password becomes visible; only eye-slash icon is visible; aria-pressed is true.	As expecte d	Pass
TC-19	Password Toggle	Click the eye-slash icon.	Password is masked; only open-eye icon is visible; aria-pressed is false.	As expecte d	Pass
TC-20	Password Toggle	Inspect the toggle button type.	Toggle button has type="button".	As expecte d	Pass
TC-21	Password Toggle	Click the toggle without submitting the login form.	Password visibility changes without submitting the form.	As expecte d	Pass
TC-22	Password Toggle	Enter a long password.	Password text does not overlap the eye icon.	As expecte d	Pass
TC-23	Password Toggle	Check accessible label in both states.	aria-label changes between “Show password” and “Hide password”.	As expecte d	Pass
TC-24	Password Toggle	Submit valid and invalid login credentials.	Existing login authentication continues to work.	As expecte d	Pass

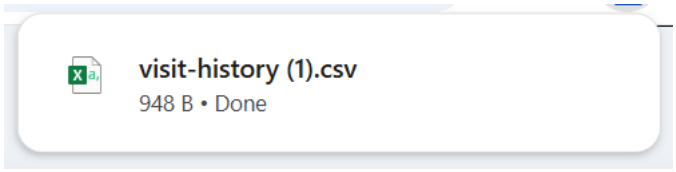

4. Acceptance Criteria Verification

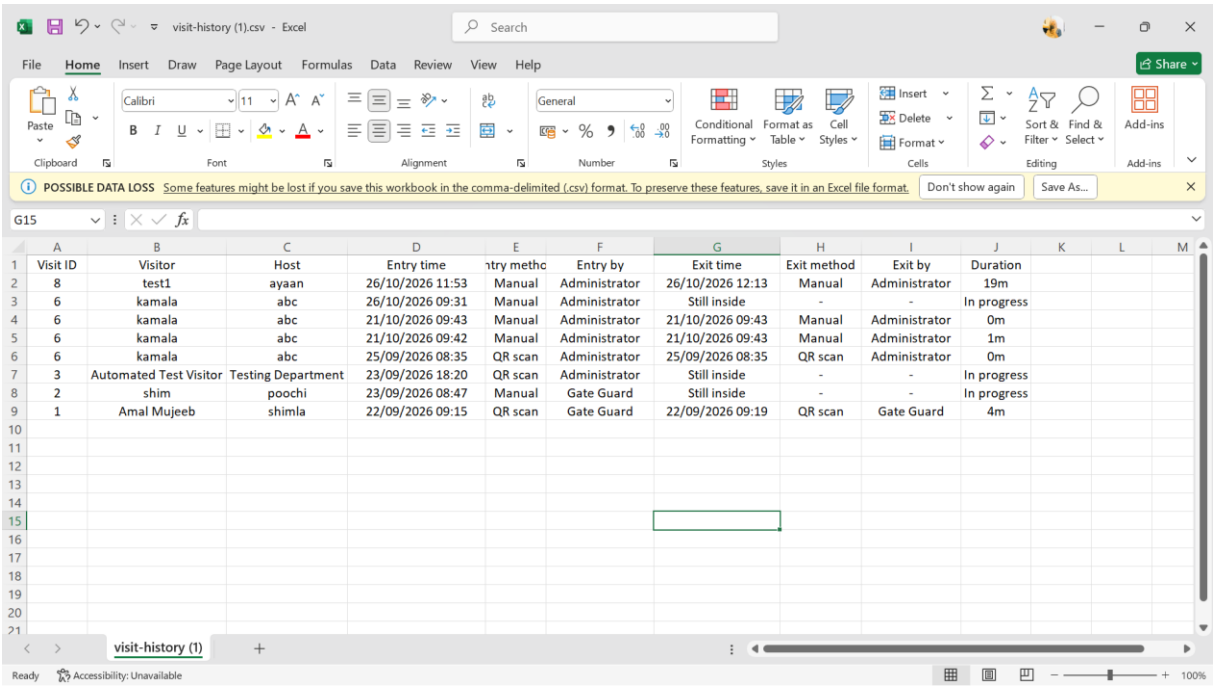

ID	Acceptance Criterion	Verification	Status
AC-001	Users can download visit history as a CSV file.	TC-01	Pass
AC-002	CSV export applies the selected visitor and date filters.	TC-02, TC-03, TC-04	Pass
AC-003	CSV export contains headings and relevant visit details.	TC-01, TC-08	Pass
AC-004	A CSV with no matching records contains headings and no data rows.	TC-05	Pass
AC-005	Existing visit-history search continues to work.	TC-07	Pass
AC-006	Overall visit history displays visit duration.	TC-09, TC-10	Pass
AC-007	Visitor profile history displays visit duration.	TC-11, TC-12	Pass
AC-008	Completed visit duration is calculated from entry and exit times.	TC-13, TC-14	Pass
AC-009	Open visits display “In progress”.	TC-10, TC-12	Pass
AC-010	CSV export includes visit duration.	TC-15	Pass
AC-011	Password is masked by default on the login page.	TC-17	Pass
AC-012	Password visibility can be toggled between masked and visible.	TC-18, TC-19	Pass
AC-013	Only the icon matching the current password state is visible.	TC-17, TC-18, TC-19	Pass
AC-014	The toggle has correct accessibility attributes and does not submit the form.	TC-20, TC-21, TC-23	Pass
AC-015	Password text does not overlap the icon.	TC-22	Pass
AC-016	Existing login authentication continues to work.	TC-24	Pass

6.Final Result

Requirements: Met / Partially Met / Not Met — Pending verification
Implementation: Completed
Testing: Completed
Acceptance Criteria: Completed
Existing Functionality Regression Testing: Completed
Final Status: Completed

6.1 Final Summary

Three change requests were implemented in the Visitor Pass system. Visit history can be exported as a CSV using the existing filters. Visit duration is displayed in the overall history, visitor profiles, and CSV export. The login page includes a client-side password visibility button with open-eye and eye-slash icons, accessible state attributes, and a default masked state. Manual testing has not yet been performed; therefore, the test results and acceptance criteria remain pending verification.

6.2 Issues / Limitations

- The CSV export is limited to the existing maximum of 500 queried visit records.
- Open visits display In progress rather than a live elapsed-time counter.
- Duration is displayed in whole minutes, hours, and days.
- Manual test results and evidence screenshots must be added after verification.
- No database schema changes were required.
